Brief information

The Project: apetron.com

Web: TRON

Compiler version: 0.5.12
Optimization: enabled
The audit date: 11.23.2020

Information

The contract code was reviewed and analyzed for vulnerabilities, logical errors, and the developers' exit scams possibility. This work was carried out concerning the project source code provided by the customer.

General conclusion

As a result of the audit, no bugs or security vulnerabilities were found. No clear signs of exit scam were found.

Telescr.in guarantees the ApeTron contract security and performance.

Liability disclaimer

The telescr.in team within this audit framework is not responsible for the developers or third parties actions on the platforms associated with this project (websites, mobile applications, and so on). The audit confirms and guarantees only the smart contract correct functioning in the revision provided by the project developers (check the revision).

Confirmed by digital signature

Aggregated data

The Contract analysis was performed using the following methods:

- Static analysis
 - Checking the code for common errors leading to the most common vulnerabilities
- Dynamic analysis
 - The Contract launching and carrying out the attacks various kinds to identify vulnerabilities
- Code Review

Received data

Recommendation	Туре	Priority	Occurrence probability
N	ot found in this	revision	

A. Errors

Not found in this revision

B. Remarks

Not found

C. Warnings

Not found

Application. Error classification

Priority			
informational	This question is not directly related to functionality but may be important to understand.		
low This question has nothing to do with security, but i affect some behavior in unexpected ways.			
Average	The problem affects some functionality but does not result in an economically significant user funds loss.		
high	This issue can result in the user funds loss.		
Probability			
low	It is unlikely that the system is in a state in which an error could occur or could be caused by any party.		
Average	This problem may likely arise or be caused by some party.		
high	It is highly likely that this problem could arise or could be exploited by some parties.		

Application. Digital bytecode print

The audit was carried out for the code certain version on the compiler version 0.5.12 with the optimization enabled.

To check the contract bytecode for identity to the one that was analysed during the audit, you must:

- Get contract bytecode (in any block explorer)
- 2. Get SHA1 from bytecode string
- 3. Compare with reference in this report

Sha1 from bytecode:

9762cc74908563ee6f11e000278141ea90674d5c

Sha1 from bytecode (non-metadata):

17858650a85c37a90fa052d4b30899883ee6e12c

Contract address:

TSMA1AZJMcxR7DzYTP8A4Wqzf3V7CxEd29
